ARTICLE

SLEEP IS YOUR SUPERPOWER

-A SUMMARY BY NIKHIL MADHAV

In his TED Talk, Matt Walker introduces the world to a new superpower. This superpower has been around for the longest time. But the problem is that no one never knew that it was a superpower. This superpower helps you to memorize stuff efficiently, prevents you from getting certain types of cancer to a particular extent, increases your lifespan, and there's

much more that this superpower is capable of doing. This superpower has a name and it is known as SLEEP. Sounds familiar doesn't it?

Everyone loves this superpower, some may have even mastered it, but they may be unaware that it is a superpower. There are some secrets about this superpower that many don't know.

HOW A LACK OF SLEEP CAN
AFFECT YOUR LIFE?:

***Mart had mentioned
that losing sleep can
cause problems in our
immune system and
cardiovascular system.***

***Sleep loss affects
reproduction for both
genders. This can also
mess up with a person's
genetic code. Males
could have premature
aging if they don't sleep
well.***

. Sleep severely affects the brain's functioning.

As per Walker's research the brain's activity is affected up to about a staggering 40%. A lack of sleep increases your risk of getting cancer significantly. So, he believes that pulling off all-nighters is definitely not the best way to get the job done.

WHY SLEEP MATTERS?:

You may have heard stories about the sleeping patterns of successful people like the CEO of PepsiCo., Indra Nooyi who only sleeps for 5 hours day. It is a really good thing to work hard, but cutting out on your sleep isn't the best solution for this.

Adults need 7-9 hours of sleep a day, teenagers need 8-10 hours and 6-12 year old require 10-13 hours of sleep. But not everyone sleeps as long as they should be sleeping.

Vision

To contribute effectively to the important national endeavour to produce quality human resource in the information technology and related areas for sustainable development of the country's IT industry needs.

Mission

The mission of the Computer Science program is to prepare students to be research and development leaders in computer science and computer technology. To this end, the program is a catalyst and a resource for shaping the future of the broad discipline of computer science.
